EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given examiner to change the Title into "Liquid crystal display with group of interdigitated electrodes".

DETAILED ACTION

On the board decision on 07/22/2010, there is no technical rationale for why IPS mode LCDs must necessarily possess interdigitated electrodes. The Examiner's only evidence for this proposition is the passages of Held, Tomioka, and Broer that were cited hereinabove. These passages, though, at best provide evidence that using interdigitated electrodes for IPS mode LCDs was very well known - not that their use was necessary.² See *In re Robertson*, 169 F.3d 743,745 (Fed. Cir. 1999) (noting that "[i]nherency...may not be established by probabilities or possibilities. The mere fact that a certain thing may result from a given set of circumstances is not sufficient" (citations omitted) (internal quotation marks omitted)).

The withdrawn claims 8-11 depend on the allowed claim 1; thus they rejoined for the allowance.

Claims 2 and 12-20 and 22 are cancelled since they belong to different embodiment or invention.

Allowable Subject Matter

Claims 1, 3-11 and 21 are allowed. The following is an examiner's statement of reasons for allowance:

Claim 1 is allowed since there is no prior teaches a liquid crystal display device comprising

- a pair of substrates, at least one of which is transparent;
- a nematic liquid crystal layer between the pair of substrates;
- a group of interdigitated electrodes formed on at least one of the substrates and adapted to apply an electric field to said liquid crystal layer, wherein the electric field has a component substantially parallel to the surfaces of the substrates; and
- an alignment layer disposed between the nematic liquid crystal layer and at least one of the substrates, wherein the alignment layer has been subjected to liquid crystal anchoring treatments in plural directions to form a plurality of liquid crystal in-plane anchoring directions, the plurality of liquid crystal in-plane anchoring directions of the alignment layer form substantially equal angles relative to one another on the corresponding substrate surface,
- a pretilt angle in each of the liquid crystal anchoring directions with respect to the corresponding substrate surface is substantially zero.

Claims 3-11 and 21 are allowed since they depend on the allowed claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
